Your Windows apps, wherever you work.

Give your team browser access to selected Windows applications. Ecoflector runs the apps on your local Windows server and makes them available to authorised users over the internet.

How it works

Your team opens selected apps in a compatible browser. The apps run on your local server.

One server. More ways to work.

01 Centralise your apps

Run compatible business applications on one Windows server so you can manage them in one place.

02 Choose who gets access

Give authorised users access to the specific applications they need.

03 Connect from a browser

Staff can open shared apps in a compatible HTML5 browser from home or another branch.
